

Enjoy seamless listening with Sonos Voice Control

Play music and control your system hands-free with unmatched privacy. Get set up with a few taps in the app, then request a favorite song, artist, or station, adjust the volume, pause, and move the sound from room to room. It all starts with "Hey Sonos."

- **Focused on your listening experience:** Sonos Voice Control is focused purely on serving up the music you love and controlling your Sonos speakers in any room - it's not a general purpose voice assistant and it doesn't aim to be. As your dedicated music assistant, Sonos Voice Control finds the music you want to listen to, from a specific song, album, or radio station, to your favorite playlists and saved content - just like your Sonos app.
- **Fast, Accurate Control:** Sonos Voice Control delivers the Sonos app experience using only your voice. Play your favorites from Sonos Radio, save and like your favorite songs to your personal library, control Roam or Move when on Bluetooth, and group or ungroup speakers directly with voice.
- **Unmatched privacy:** Sonos Voice Control processes your voice and understands your requests entirely on the speaker. No audio or transcript is sent to the cloud, stored, listened to or read by anyone, so all your conversations will remain private.
- **Natural Conversation from Giancarlo Esposito:** Sonos worked with Giancarlo Esposito to deliver a familiar voice experience in the United States market. Giancarlo's voice has all the right tonal elements to make our text to speech positive, warm, and informative.

Control Your

System

"Hey Sonos, stop in the Kitchen and play in the Bedroom."
